

Prokopios Magiatis

Prokopios Magiatis, is associate Professor of Pharmacognosy and Natural Products Chemistry at the Department of Pharmacy of the University of Athens. He graduated from the same Department, and he did his postdoctoral research at the Curie Institute in Paris. He has worked as a visiting professor at the Olive center of the University of California, Davis and as affiliate professor in the medical school of Virginia Commonwealth University. In 2009, he was awarded the Egon-

Stahl silver medal as the top scientist under 40 years old in the field of natural products chemistry and pharmacology. His research is focused on the analysis, isolation, chemical synthesis, and bioactivity of natural products and especially on the phenolic compounds of olive oil. He has been awarded as the inventor of the year 2016 in Greece for his invention ARISTOLEO. He is an author of 150 publications and 15 patents. He has created the first University laboratory that provides olive oil analysis by NMR to thousands of producers, in terms of its content of health-protective ingredients. He is a co-founder of the World Olive Center for Health and organizer of the international olive oil competition OLYMPIA health & Nutrition awards.
