

Côté Eugénie

Eugénie Côté is a third-year undergraduate student in cognitive neuroscience in the Department of Psychology at the University of Montreal. She is part of the Cheminement Honor stream that is limited to the best students in the department at the bachelor's level leading to a research report. With previous experience as a project manager and advisor for people living with Parkinson's disease and their family caregivers for a community organization in the province of Quebec (Canada), she developed an interest in the impact of neurodegenerative diseases on older adults and their families. She has been working since April 2024 as a research assistant under the supervision of Dr. Alexander Moreno in his laboratory Innovation, Technology, and Cognition (INTECOG). She is currently expanding her research interest in the use of virtual reality in palliative care, as well as the use of assistive robotics for home support for seniors with or without neurocognitive disorders. She believes that her work will contribute to improving the well-being of older adults, particularly those living with neurodegenerative disorders like Alzheimer's disease.
